

MATEO JOSÉ DUEÑAS ANDRADE

Quito, Ecuador | +593 986 322 820 | mate.due02@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Full-Stack Software Engineer (**React, Next.js, TypeScript, React Native, Python, FastAPI, Node.js, PostgreSQL**) specializing in building secure, production-ready web and mobile systems. Delivered multi-platform SaaS products, institutional platforms, and corporate websites, with emphasis on security hardening, CI/CD pipelines, and cross-platform consistency.

EDUCATION

Bachelor of Software Engineering

Escuela Politécnica Nacional

Oct 2020 – Feb 2026

Quito, Ecuador

- **Highest GPA in mid-program evaluation (Feb 2025)**
- **Highest GPA in end-program evaluation (Feb 2026)**
- Relevant coursework: Data Structures & Algorithms, Architecture, Web & Mobile Development, APIs, Agile Methodologies.

EXPERIENCE

AI Training Engineer (Freelance)

GreenLight Workforce Solutions (AnyoneAI)

May 2026 – Present

Remote

- Delivered **778 approved tasks** across **11 workstreams** producing benchmark datasets and expert evaluations for code generation and code editing models, capturing real developer workflows and exposing model failure modes.
- Reviewer on **406 of those tasks (52%)**: audited peer submissions for correctness and rule compliance, applied corrections directly, and returned written feedback to each contributor.
- Annotated natural language queries against production repositories, identifying the functions that answer each query and documenting evidence with **commit-pinned links, line ranges, and search rationale**; verified generated answers against technical documentation and scored AI-generated web interfaces against structured rubrics.

Fullstack Developer

Bridge Staff International (ACR Developer)

Jan 2026 – Present

Hybrid

- Built and stabilized a full-stack SaaS monorepo (**React, Node.js/Express, React Native/Expo, Supabase, Drizzle ORM, Stripe, Turborepo**) covering web, mobile, and backend; closed critical gaps in calendar, orders, storefront, subscription gating, and billing flows, achieving full production readiness.
- Executed phased security hardening on a live fintech investment platform (Connect-Invest), closing authorization and validation gaps and adding server-side pricing controls and audit trails, reducing operational risk in live financial operations.
- Delivered a corporate marketing website (Hawkeye Hometown Builders) using **Next.js App Router, TypeScript, Bootstrap 5, Resend**, and a full CI/CD pipeline with security scanning (CodeQL/Semgrep) via GitHub Actions; deployed on Vercel.

Software Engineer Intern

Escuela Politécnica Nacional

Jan 2025 – Jul 2025

Quito, Ecuador

- Designed and operated backend services, frontend modules, and data pipelines (**Python, FastAPI, SQLAlchemy, React**) supporting institutional planning workflows with hundreds of active records.
- Collaborated with academic and administrative stakeholders to implement role-based access control and data validation rules, improving data consistency and reducing rework during reporting cycles.
- Consolidated bug fixes, dependency upgrades, and input sanitization into a single stabilization effort, restoring **100% platform availability** and preventing recurring failures through CI validation.

Digital Inclusion Program Instructor & Academic Supervisor

Escuela Politécnica Nacional

Feb 2024 – Aug 2024

Quito, Ecuador

- Delivered hands-on training in digital productivity tools to rural educators and senior adults, contributing to an **85% completion rate** across **200+ participants**.
- Supervised **70+ instructors** and validated weekly deliverables for **120+ learners**, giving structured feedback to **20 educators and 40–50 learners each week** to keep curriculum compliance and instructional quality.

Computer Society EPN Chapter Chair

IEEE

Jan 2025 – Jan 2026

Quito, Ecuador

- Led the IEEE Computer Society chapter, organizing **30+ technical events** (workshops, coding sessions, competitions), significantly increasing student engagement.
- Coordinated collaboration between universities, international and local speakers, and sponsors across events.
- Managed budget, pricing, advertising (social media and events web pages), and contact with collaborators.

PROJECTS

Documentation available in portfolio: md-briefcase.vercel.app

CrumbCoach — Baker SaaS Platform

React, Vite, Node.js/Express, React Native/Expo, Supabase, Drizzle ORM, Stripe, Turborepo, TypeScript

- Principal contributor on a monorepo digital product for bakers: recovered mobile connectivity, implemented subscription gating, rebuilt the calendar module UX, and achieved **web-mobile feature parity** across orders, dashboard, payments, and storefront.
- Implemented layered security hardening (IDOR, CSRF, restrictive CORS, Helmet, Zod schema validation, audit trail) and eliminated **TypeScript technical debt** (mass `as any` removal), transitioning the product from feature-rich but fragile to production-stable.

Connect-Invest — Real Estate Investment Platform

Next.js 16, React 19, TypeScript, TailwindCSS 4, Expo, Supabase, Plaid, Dwolla, Sentry, Turborepo

- Consolidated multi-phase code freeze on the web platform: implemented KYC/MFA flows, webhook security, investment and wallet pages, and a maturity reminders cron job; resolved **CI failures** and dependency drift for a live fintech product (Plaid KYC, Dwolla payments).
- Built the marketing site from a Figma design with **high-fidelity responsive implementation** across all breakpoints (Next.js, TailwindCSS 4), including home, portfolio, and about sections, plus rate limiting on sensitive endpoints.

POA Management System — Thesis Project

FastAPI, React, TypeScript, PostgreSQL, SQLAlchemy, Alembic

- Built a full-stack institutional platform managing **500+ POAs** and thousands of related records, supporting multiple director-level roles.
- Implemented automated ETL and validation pipelines that reduced institutional reporting cycles from **3 months to near real-time**.
- Designed **RESTful APIs with RBAC**, schema migrations, and CI checks to ensure data integrity and long-term maintainability.

Automated Certificate Generation System

Python, Selenium, Pandas, Web Scraping, ETL, Excel-Driven Automation

- Developed a fully automated workflow to scrape project data and generate multi-page academic certificates at scale.
- Reduced certificate production from **1 week to 30 minutes**, supporting **200–300 certificates annually**.
- Implemented repeatable, zero-intervention pipelines driven by structured Excel inputs.

SKILLS

Languages	Python, JavaScript / TypeScript, Java, C/C++
Frontend	React 18/19, Next.js (App Router), React Native/Expo, React Hooks/Router/Forms, HTML5, CSS3, Tailwind-CSS, Bootstrap, WordPress, WooCommerce
Backend & APIs	FastAPI, Node.js, Express, RESTful API design, RBAC, SQLAlchemy, Drizzle ORM, Alembic, Supabase, JWT, OAuth 2.0, Zod, Stripe, Twilio, SendGrid
Databases & Data	PostgreSQL, MySQL, MongoDB, ETL pipelines, Excel automation, data validation, query optimization
AI & Evaluation	LLM output evaluation, benchmark dataset creation, data annotation, rubric-based scoring, prompt engineering
Testing & Quality	pytest, Vitest, Playwright E2E, ESLint, Prettier, Husky/lint-staged, security auditing (IDOR, CSRF, CORS hardening)
DevOps & Cloud	Docker, Git, GitHub Actions (CI/CD), Turborepo, pnpm workspaces, AWS (Amplify, S3, CloudFront, Lambda), Render, Vercel
Design	Figma, UX/UI best practices, high-fidelity Figma-to-code implementation

CERTIFICATIONS

Introduction to Agent Skills, Claude Code 101, Introduction to Claude Cowork, AI Fluency: AI Capabilities & Limitations Anthropic	May 2026
Networking Basics CISCO	Mar 2023
Digital Transformation Instituto Europeo de Posgrado	Feb 2023
Scrum Foundation Professional Certificate CERTIPROF	Dec 2022
